

QUNON

Flexibly “Placeable” solo booth for web meetings.

WELLUP

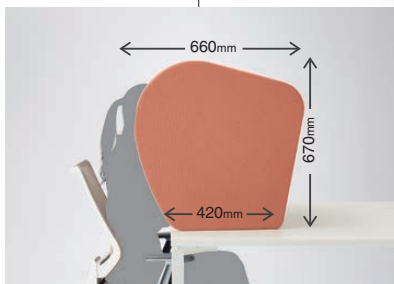

FUNCTION

Reduces sound leakage to the surroundings.

When QUNON is placed on the table, the absorption and sound insulation effects reduce sound leakage, mainly towards the front and sides.

A transparent material is used for the upper part to enhance facial visibility during online meetings.

A front panel that covers up to the top and side panels that encloses the face covers the sound source. Acoustic urethane is used on the inside of the booth.

Lower part of the front panel has a gap on both corners for cable access.
