CONCEPT

Feel of becoming one with the chair

'ing' is equipped with a gliding mechanism which freely moves 360° according to the subtle movements of the human body.

The human body is built to move. KOKUYO's 'ing' mechanism was born from this fact.

Dual structure mechanism to realize a 360° movement.

The ing dual structure comprises an upper structure for back and forward tilt, and the bottom structure for side tilts. This is the operating heart of ing for a new sensation of a 360° movement.

Befitted to various sitting postures. Support and maintain body posture for all work life.

FEATURES

Lumbar-Less Design

Fits various body shapes without adjustment. ing's 360° glide follows the natural pelvic angle to maintain the body's natural spinal S-shape curve keeping the body aligned with complete freedom of movement.

Front Free Tilt

Relieves pressure on the under thighs.

Seat Height Adjustment Lever

Adjustable range 120mm range

Castors

Available in hard nylon castors suitable for soft flooring or polyurethane castors suitable for hard flooring. Castor diameter:ø60mm

Fixed Grip Arms

The arms are independent to the glide, allowing complete movement while gripping the arms.

*Adjustable Grip Arms also available.

3D Posture Support seat

The 3D posture support seat evenly distributes body weight and supports seating posture by dispersing body weight and prevents sliding when leaned forward.

Gliding Stopper (Gliding On/Off modes)

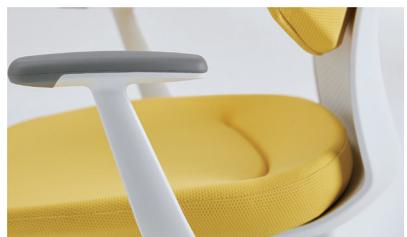

Switch between the gliding mode and non-gliding mode to preference.

Five-star base

Available in reinforced nylon or polished aluminum.

360° Gliding System

'ing' is equipped with a gliding mechanism which freely moves 360° according to the subtle movements of the human body. It follows the forward tilt and backward tilt movements, up to left and right and diagonal twists by a combination of two layers of mechanisms. It brings out the body's natural movements and activates the body.

SCENE

Active creativity

Dynamism to executives

Max movement with height adjustable desks

VARIATION

Backrest types each with distinct gliding.

Tall back (Fabric)

Only model equipped with an extra backrest bend for extra back movement of the upper body. This adds comfort to swaying while leaning back.

Wide back (Fabric)

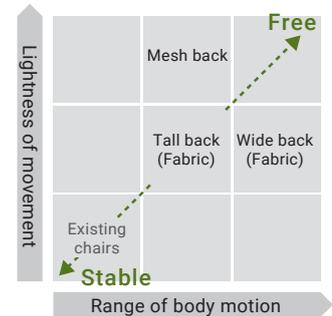

The wide back is equipped with extra side support and available as a low-back allowing to stretch freely and unhindered.

Tall back (Mesh)

The mesh back allows the body to glide and sway even more lightly and naturally. Although the backrest bend is not equipped, the mesh backrest flexibly supports the body.

Gliding feel

- Lightness of movement = Less force needed to change posture

- Range of body motion = Scope of body movement

White nylon base

CleanTect coating

Stain-preventative coating on white coated 5-star bases will prevent dirt and shoe marks, as well as being easy to clean.

Body color x Castor color

MATERIALS

Backrest

Backrest shell for fabric backrest: Polypropylene. Frame for mesh backrest: Reinforced nylon.

Upholstery (fabric): Polyester. Upholstery (mesh): Elastic polyester.

Cushion: Slab urethane, polypropylene. Cushion: Molded polyurethane. Fabric: Polyester

Seat

Sheet shell: Polypropylene. Cushion: Molded polyurethane. Fabric: Polyester

Armrests

For adjustable arms or fixed nylon arms: Reinforced nylon, polyurethane skin mold.

For fixed polished arms: Aluminum die-cast (Polished), polyurethane skin mold.

5-star base

Nylon base: Reinforced nylon.

Aluminum base: Aluminum die-cast.

Castor diameter: ø60mm
